

Reversing Systemic Origins of the Pseudo Earth Methodologies

Dr. Michael Castle

We are being showered with millions of chemicals consisting of violent and toxic substances that you cannot imagine.

As a result, the very soil that is used to grow our foods, on this planet we call Mother Earth is now highly contaminated/impacted by the hazardous and toxic waste residues from the heavy-metal salts of Barium and Aluminum, Cadmium, Strontium, Nickel, Gallium, Potassium, Methylene di-bromides, Lithium, Cobalt, Thorium and the whole nine-yards of significant heavy-metals, nano self-replicating mutagens, weaponized Influenza and such.....

We have to do something to reduce the toxic characteristics imbued upon our soil by the never ending ChemTrails. These heavy metals now in our soil are also being deposited into our fruits and veggies, systemically.....they will slowly poison you.

I have engaged in planting common vegetables in a "Lil Greenhouse I made in my backyard. My self-imposed mission was to reduce or eliminate these poisons from the soil I am planting my foods in. I instinctively knew I must develop simple methods to reverse these contaminant aberrations in the soil. By observation and analysis, I knew all too well the soils have been severely impacted by these heavy-metals and toxins and don't forget the Franken-fungi mixed with viruses...all have been impacted but can be reversed. Greenhouses share the same particulates and contaminated airspace, however, reduced in groundfall of those contaminants, a minor assist.

Minerals....Your First Sword for Survival

Reverse the toxicity effects of the endless ChemTrails...all Humans must have minerals. Get some good, natural clay...Calcium Bentonite Clay or fossilized Shell Flour, diatomaceous earth clay or Agronics Rock Dust Clod Buster Minerals (not a clay, a petrified Mineral nutrient)...Willard's CAW (Dark), all prime sources of Natural Minerals.

Minerals can be added to the drinking water. Talk about minerals...Willard's Water (Dark), Catalyst Altered Waters are comprised of Lignite Coal that Dr. John Willard Sr. found a method to put Lignite Coal into a water solution, prehistoric plant minerals, carbonized. I put a teaspoon per gallon in drinking water...chlorine and Fluorine (as Fluorides) are almost immediately dissociated or complexed by disassociation of the molecules of all halogens, Benzenes, and most all Phthalates, Oligamers and complexation of all carboxyl, hydroxyl and Ionomeric groups via strong mineral cations.

Charcoal

Here's a simple method to co-absorb heavy metals out of the soil and protect a "Lil soil microbe" that is critical for transmuting nutrients of the soil to the plants feeder tendrils roots. I wrote about this microbe's possible extinction (endo mycorrhizae) and the direct lethality caused by Barium and Aluminum and Nickel heavy metal salts (with a very long list of others). In *The Methodic Demise of Natural Earth, 2003* I wrote about this consequence...the one microbe that enables us, whom eat plants and all there is from, nutrition...if that becomes extinct...what are We gonna eat? Does not matter, we will die of starvation, period.

But, simply...save it; put good wood charcoal in and around, learn how to plant your veggies and greens in it. Why? Charcoal is active enough to absorb these heavy metals, in the water phase. It will soak and lock it up in carbon lattice, these elemental and organic toxins cannot transfer to veggies. Get your own patch started...grow some food...it's very simple.

Orgone in a Bucket

Here's something, probably, no one has ever told you before: you can take a simple metal pail. zinc galvanized, put two hands full of Magnetite Black Sand in the bottom (Dr. J.V. Milewski) in about a half inch of good water (pure Spring or distilled) on top, toss in a real quartz crystal and a copper Penny....put this in proximity of vegetation...almost grows right before your eyes! The vegetation I grew responded to this homemade bucket Orgone generator. Orgone means at the root-word; orgasm, orgasmic, organic - God's Reproductive Energy.

Good Weather

What's really neat are how these same type Orgone field generators can and will neutralize bad weather coming into your area. Wilhelm Reich called this 'neutralizing the Oranure,' and it is awesome how he achieved such feat. I will echo this portion of Reich's invention and developments. If many naturally-oriented-people put these devices in their areas...Natural Weather Systems would once again emerge from this unthinkable assault on Natural Weather Forces. We could override even the extreme ELF wave forms spiked with microwaves. We could shut it down with Orgone Energy.

Blessings Be to all,
Dr. Michael Castle
